

FLAIROSOL®

CONTINUOUS SPRAY COMPLETE PACKAGING SOLUTION

A high performing sustainable option that combines
convenience with premium quality!

Unique, custom bottles developed specially for the innovative spray dispensing solution

At TricorBraun, we're committed to delivering innovative packaging solutions that drive sales success. We regularly scour the marketplace to source and bring you dispensing solutions that address all your needs, from form and function to customer experience and sustainability.

We can pair the right dispenser with a custom-designed bottle to achieve continuity and speed to market. We also carry a portfolio of our own custom-designed bottles to choose from for an optimum fit right off the shelf. The result: complete dispensing solutions with distinctive designs that wow customers and stand out from the competition.

TricorBraun's complete packaging solutions meet consumer demands while emphasizing visual appeal, innovation, functionality, and speed to market.

Custom Solutions

Discover custom bottle and graphic designs crafted by our award-winning Design & Engineering team, tailored to your needs for distinctive solutions. These designs resonate with consumer expectations, offering innovative package formats that span from minimalistic to vibrant to retro, ensuring a perfect match for your brand.

The depth and breadth of the Design & Engineering team's expertise are unmatched, offering support in all aspects of custom packaging development, including industrial design, graphic design, packaging engineering, mold development, quality engineering, and commercialization.

If you're interested in pursuing a new design tailed to your specific brand requirements, email us at marketing@tricorbrown.com.

MINIMAL

Customize bottle shapes and sizes, as well as label types, to align perfectly with your brand's distinct specifications. The bottles displayed are made of HDPE. Inquire now about optimizing for PET.

Driving a Responsible Packaging Strategy

Develop a recyclable solution for a circular economy.

Talk to our trained team members on optimizing package formats through shape and decoration. Consider testing at a certified facility to receive APR recognition.

Utilize post-consumer resin (PCR) to reduce total virgin plastic use.

Our team can conduct testing to ensure requirements for package performance are met.

Implement reusable strategy to minimize single-use packaging.

Other benefits include fostering customer loyalty and minimizing total packaging costs.

Ensure no unnecessary headspace.

Our modeling capabilities enable you to test new solutions on your filling lines before investing in production tooling.

Evaluate material gram weight for package performance while helping to prevent unnecessary plastic being used.

Our team can conduct testing to ensure requirements for package performance are met.

Optimize the entire Supply Chain.

Reduce transportation distances and implement more efficient packaging processes to further reduce total carbon footprint.
